ABOUT THIS MANUAL

Purpose

This manual describes the assembly, installation, operation and troubleshooting of this unit. Please read this manual carefully before installations and operations. Keep this manual for future reference.

Scope

This manual provides safety and installation guidelines as well as information on tools and wiring.

SAFETY INSTRUCTIONS

⚠ WARNING: This chapter contains important safety and operating instructions. Read and keep this manual for future reference.

1. Before using the unit, read all instructions and cautionary markings on the unit, the batteries and all appropriate sections of this manual.
2. **CAUTION** – To reduce risk of injury, charge only deep-cycle lead acid type rechargeable batteries. If any other types of batteries are used, follow the manufacturer’s instructions carefully.
3. Do not disassemble the unit. Take it to a qualified service center when service or repair is required. Incorrect re-assembly may result in a risk of electric shock or fire.
4. To reduce risk of electric shock, disconnect all wirings before attempting any maintenance or cleaning. Turning off the unit will not reduce this risk.
5. **CAUTION** – Only qualified personnel can install this device with battery.
6. **NEVER** charge a frozen battery.
7. For optimum operation of this inverter/charger, please follow required spec to select appropriate cable size. It’s very important to correctly operate this inverter/charger.
8. Be very cautious when working with metal tools on or around batteries. A potential risk exists to drop a tool to spark or short circuit batteries or other electrical parts and could cause an explosion.
9. Please strictly follow installation procedure when you want to disconnect AC or DC terminals. Please refer to INSTALLATION section of this manual for the details.
10. One piece of 150A fuse is provided as over-current protection for the battery supply.
11. GROUNDING INSTRUCTIONS -This inverter/charger should be connected to a permanent grounded wiring system. Be sure to comply with local requirements and regulation to install this inverter.
12. NEVER cause AC output and DC input short circuited. Do NOT connect to the mains when DC input short circuits.
13. **Warning!!** Only qualified service persons are able to service this device. If errors still persist after following troubleshooting table, please send this inverter/charger back to local dealer or service center for maintenance.
14. **WARNING:** Because this inverter is non-isolated, only three types of PV modules are acceptable: single crystalline, poly crystalline with class A-rated and CIGS modules. To avoid any malfunction, do not connect any PV modules with possible current leakage to the inverter. For example, grounded PV modules will cause current leakage to the inverter. When using CIGS modules, please be sure NO grounding.
15. **CAUTION:** It’s required to use PV junction box with surge protection. Otherwise, it will cause damage on inverter when lightning occurs on PV modules.

INTRODUCTION

This is a multi-function inverter, combining functions of inverter, solar charger and battery charger to offer uninterruptible power support in a single package. The comprehensive LCD display offers user-configurable and easy-accessible button operations such as battery charging current, AC or solar charging priority, and acceptable input voltage based on different applications.

Features

- Pure sine wave inverter
- Built-in LED bars to indicate the energy source and power flow
- Built-in BMS communication port
- Built-in anti-dust kit
- Inverter running without battery
- Configurable input voltage range for home appliances and personal computers via LCD setting
- Configurable battery charging current based on applications via LCD setting
- Configurable AC/Solar Charger priority via LCD setting
- Compatible to mains voltage or generator power
- Overload/ Over temperature/ short circuit protection
- Smart battery charger design for optimized battery performance

Basic System Architecture

The following illustration shows basic application for this unit. It also required the following devices to have a complete running system:

- Generator or Utility mains.
- PV modules

Consult with your system integrator for other possible system architectures depending on your requirements.

This inverter can power various appliances in home or office environment, including motor-type appliances such as tube light, fan, refrigerator and air conditioners.

12. BMS communication port
13. Internal WiFi
14. Input circuit breaker
15. Anti-dust filter

INSTALLATION

Unpacking and Inspection

Before installation, please inspect the unit. Be sure that nothing inside the package is damaged. You should have received the following items inside of package:

- The unit x 1
- User manual x 1
- Communication cable x 1
- DC Fuse x 2

Preparation

Before connecting all wirings, please take off bottom cover by removing two screws as shown below.

Mounting the Unit

Consider the following points before selecting where to install:

- Do not mount the inverter on flammable construction materials.
- Mount on a solid surface
- Install this inverter at eye level in order to allow the LCD display to be read at all times.
- For proper air circulation to dissipate heat, allow a clearance of approx. 20 cm to the side and approx. 50 cm above and below the unit.
- The ambient temperature should be between 0°C and 55°C to ensure optimal operation.
- The recommended installation position is to be adhered to the wall vertically.
- Be sure to keep other objects and surfaces as shown in the right diagram to guarantee sufficient heat dissipation and to have enough space for removing wires.

SUITABLE FOR MOUNTING ON CONCRETE OR OTHER NON-COMBUSTIBLE SURFACE ONLY.

Drill three holes in the marked location and then install the unit by screwing three screws. It's recommended to use M4 or M5 screws.

Battery Connection

This model can be operated without battery connection. Connect to battery if necessary.

CAUTION: For safety operation and regulation compliance, it's requested to install a separate DC over-current protector or disconnect device between battery and inverter. It may not be requested to have a disconnect device in some applications, however, it's still requested to have over-current protection installed. Please refer to typical amperage in below table as required fuse or breaker size.

WARNING! All wiring must be performed by a qualified personnel.

WARNING! It's very important for system safety and efficient operation to use appropriate cable for battery connection. To reduce risk of injury, please use the proper recommended cable and terminal size as below.

Ring terminal:

Recommended battery cable and terminal size:

Model	Typical Amperage	Battery capacity	Cable mm ²	Dimensions Ring Terminal			Torque value (max)
				W (mm)	D (mm)	L (mm)	
TommaTech C ProX 8.0K	182.2A	2 X 4AWG	25	12.2	5.3	33.2	3 Nm

Please follow below steps to implement battery connection:

1. Assemble battery ring terminal based on recommended battery cable and terminal size.
2. This unit supports 48VDC system. Connect all battery packs as below chart. It is recommended to connect at least 250Ah capacity battery.

3. Remove the nuts on the battery terminals of the inverter.

4. Insert the ring terminals of battery cable flatly into battery terminals. Then, make sure the nuts are screwed firmly with correct torque.

5. Connect the other end of the battery cable to the battery (the recommended terminal spec should follow the suggestion of battery manufacturer). Make sure polarity at both the battery and the inverter is correctly connected.

WARNING: Shock Hazard

Installation must be performed with care due to high battery voltage in series.

CAUTION!! Do not place anything between inverter terminals and the ring terminals. Otherwise, overheating may occur.

CAUTION!! Do not apply anti-oxidant substance on the terminals before terminals are securely tightened.

CAUTION!! Before making the final DC connection or closing DC breaker/disconnector, be sure positive (+) must be connected to positive (+) and negative (-) must be connected to negative (-).

AC Input/Output Connection

CAUTION!! Before connecting to AC input power source, please install a separate AC breaker between inverter and AC input power source. This will ensure the inverter can be securely disconnected during maintenance and fully protected from over current of AC input. The recommended spec of AC breaker is 20A.

CAUTION!! There are two terminal blocks with "IN" and "OUT" markings. Please do NOT mis-connect input and output connectors.

WARNING! All wiring must be performed by a qualified personnel.

WARNING! It's very important for system safety and efficient operation to use appropriate cable for AC input connection. To reduce risk of injury, please use the proper recommended cable size as below.

Suggested cable requirement for AC wires

Model	Gauge	Cable (mm ²)	Torque Value
TommaTech C ProX 8.0K	8 AWG	8	1.4~ 1.6Nm

Please follow below steps to implement AC input/output connection:

1. Before making AC input/output connection, be sure to open DC protector or disconnecter first.
2. Remove insulation sleeve 10mm for eight conductors. And shorten phase L and neutral conductor N 3mm
3. Insert AC input wires according to polarities indicated on terminal block and tighten the terminal screws.

Be sure to connect PE protective conductor (⊕) first.

⊕ → **Ground (yellow-green)**

L → **LINE (brown or black)**

N → **Neutral (blue)**

WARNING:

Be sure that AC power source is disconnected before attempting to hardwire it to the unit.

4. This inverter is equipped with dual-output. There are four terminals (L1/N1, L2/N2) available on output port. It's set up through LCD program or monitoring software to turn on and off the second output. Refer to "LCD setting" section for the details. Insert AC output wires according to polarities indicated on terminal block and tighten terminal screws. Be sure to connect PE protective conductor (⊕) first.

⊕ → **Ground (yellow-green)**

L1 → **LINE (brown or black)**

N1 → **Neutral (blue)**

L2 → **LINE (brown or black)**

N2 → **Neutral (blue)**

5. Make sure the wires are securely connected.

CAUTION: Appliances such as air conditioner are required at least 2~3 minutes to restart because it's required to have enough time to balance refrigerant gas inside of circuits. If a power shortage occurs and recovers in a short time, it will cause damage to your connected appliances. To prevent this kind of damage, please check manufacturer of air conditioner if it's equipped with time-delay function before installation. Otherwise, this inverter/charger will trig overload fault and cut off output to protect your appliance but sometimes it still causes internal damage to the air conditioner.

PV Connection

CAUTION: Before connecting to PV modules, please install separately a DC circuit breaker between inverter and PV modules.

WARNING! It's very important for system safety and efficient operation to use appropriate cable for PV module connection. To reduce risk of injury, please use the proper recommended cable size as below.

Wire Size	Cable (mm ²)
10~12 AWG	4~6

WARNING: Because this inverter is non-isolated, only three types of PV modules are acceptable: single crystalline, poly crystalline with class A-rated and CIGS modules. To avoid any malfunction, do not connect any PV modules with possible current leakage to the inverter. For example, grounded PV modules will cause current leakage to the inverter. When using CIGS modules, please be sure NO grounding.

CAUTION: It's requested to use PV junction box with surge protection. Otherwise, it will cause damage on inverter when lightning occurs on PV modules. Never directly touch the terminals of inverter. It might cause lethal electric shock.

PV Module Selection:

When selecting proper PV modules, please be sure to consider below parameters:

1. Open circuit Voltage (Voc) of PV modules not exceeds max. PV array open circuit voltage of inverter.
2. Open circuit Voltage (Voc) of PV modules should be higher than min. battery voltage.

INVERTER MODEL	TommaTech C ProX 8.0K
Max. PV Array Power	6000W x 2
Max. PV Array Open Circuit Voltage	500Vdc
PV Array MPPT Voltage Range	90~450Vdc
Max. PV input Current	22A x 2

This unit is applied with two strings of PV array. Please make sure that the maximum current load for each string cannot beyond of the max PV input current spec.

Take 600Wp PV module as an example, the recommended configurations are listed as below table.

Solar Panel Spec. (reference)	Solar Input 1	Solar Input 2	Q'ty of panels	Total input power
	Min in series: 3pcs, per input, Max. in series: 9pcs, per input			
- 600Wp	3pcs in series	x	3pcs	1800W
- Vmp: 45.30Vdc	x	3pcs in series	3pcs	1800W
- Imp: 13.25A	9pcs in series	x	9pcs	5400W
- Voc: 53.50Vdc	9pcs in series	9pcs in series	18pcs	10800W
- Isc: 14.03A	5pcs in series, 2 Strings in parallel	5pcs in series, 2 Strings in parallel	20pcs	12000W

Take 660Wp PV module as an example, the recommended configurations are listed as below table.

Solar Panel Spec. (reference)	Solar Input 1	Solar Input 2	Q'ty of panels	Total input power
	Min in series: 3pcs, per input Max. in series: 9pcs, per input for TommaTech C ProX 8.0K model			
- 660Wp	3pcs in series	x	3pcs	1980W
- Vmp: 37.80Vdc	x	3pcs in series	3pcs	1980W
- Imp: 17.46A	9pcs in series	x	9pcs	5940W
- Voc: 45.60Vdc	9pcs in series	9pcs in series	18pcs	11880W
- Isc: 18.55A				

PV Module Wire Connection

Please follow below steps to implement PV module connection:

1. Remove insulation sleeve 11~13 mm for positive and negative conductors.
2. Suggest to put bootlace ferrules on the end of positive and negative wires with a proper crimping tool.
3. Check correct polarity of wire connection from PV modules and PV input terminals. Connect positive pole (+) of connection wire to positive pole (+) of PV input terminals, and connect negative pole (-) of connection wire to negative pole (-) of PV input terminals. Pull the spring cover upward to loosen the PV terminal block, insert the wire conductors into it, and then press down on the spring cover. Make sure the wires are securely locked on PV terminals.

Final Assembly

After connecting all wirings, please put bottom cover back by screwing screws as shown below.

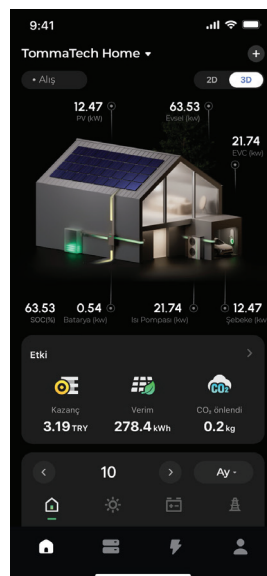

Communication Options

Serial Connection

This unit is equipped with a communication port to communicate with a PC with corresponding software. Please use supplied communication cable to connect to inverter and PC. For the detailed software operation, please contact the distributor to obtain software and corresponding user manual downloads.

Wi-Fi Connection

This unit is equipped with a Wi-Fi transmitter. Wi-Fi transmitter can enable wireless communication between off-grid inverters and monitoring platform. Users can access and control the monitored inverter with downloaded APP. You may find "TommaTech Cloud" app from the Apple® Store and Google® Play Store. All data loggers and parameters are saved in TommaTech Cloud. For quick installation and operation, please refer to Appendix II - The Wi-Fi Operation Guide for details.

BMS Communication

If connecting to Lithium-ion battery pack, please check battery provider to get a correct communication cable. Please refer to Appendix I- BMS Communication Installation for details.

OPERATION

Power ON/OFF

Side view of unit

Once the unit has been properly installed and the batteries are connected well, simply press On/Off switch to turn on the unit.

Operation and Display Panel

The operation and display panel, shown in below chart, is on the front panel of the inverter. It includes three indicators, four function keys and a LCD display, indicating the operating status and input/output power information.

LED Indicator

LED Indicator		Messages	
* INV * AC	Green	Solid On	Output is powered by utility in Line mode.
		Flashing	Output is powered by battery or PV in battery mode.
* CHG	Green	Solid On	Battery is fully charged.
		Flashing	Battery is charging.
▲ FAULT	Red	Solid On	Fault occurs in the inverter.
		Flashing	Warning condition occurs in the inverter.

Function Keys

Function Key	Description
↻	ESC To exit setting mode
▲	UP To go to previous selection
▼	DOWN To go to next selection
↵	ENTER To confirm the selection in setting mode or enter setting mode

LDC Display Icons

Icon	Function description	
Input Source Information		
AC	Indicates the AC input.	
PV1	Indicates the PV input information of Tracker 1	
PV2	Indicates the PV input information of Tracker 2	
INPUTBATTFEED 	Indicate input voltage, input frequency, PV voltage, PV current, PV power, charger current, charger power, discharger current and battery voltage.	
Configuration Program and Fault Information		
	Indicates the setting programs.	
	Indicates the warning and fault codes. Warning: 88 [△] flashing with warning code. Fault: 88 _{ERROR} lighting with fault code.	
Output Information		
OUTPUTBATTLOAD 	Indicate output voltage, output frequency, load percent, load in VA, load in Watt and discharging current.	
Battery Information		
	Indicates battery level by 0-24%, 25-49%, 50-74% and 75-100%, charging / discharging status.	
Battery in charging status, it will present battery charging status.		
Status	Battery Capacity	LCD Display
Constant Current mode / Constant Voltage mode	0-24%	4 bars will flash in turns.
	25-49%	Bottom bar will be on and the other three bars will flash in turns.
	50-74%	Bottom two bars will be on and the other two bars will flash in turns.
	75-100%	Bottom three bars will be on and the top bar will flash.
Floating mode. Batteries are fully charged.		4 bars will be on.

Battery in discharging status, it will present battery capacity.				
Battery Capacity	0-24%	25-49%	50-74%	75-100%
LCD Display				
Load Information				
	Indicates overload.			
	Indicates the load level by 0-24%, 25-49%, 50-74% and 75-100%.			
	0%~24%	25%~49%	50%~74%	75%~100%
				
Mode Operation Information				
	Indicates unit connects to the mains.			
	Indicates unit connects to the PV panel.			
	Indicates load is supplied by utility power.			
	Indicates the utility charger circuit is working.			
	Indicates the DC/AC inverter circuit is working.			
Mute Operation				
	Indicates unit alarm is disabled.			
Other Information				
	Indicates BMS communication is established between the inverter and Lithium battery. It flashes while BMS is detected by inverter but communication can't be well established.			
	Indicates the unit is connected to an external energy meter.			
	Indicates the unit is connected with WiFi well if the icon is solid on. It flashes while not be connected.			

LCD Setting

After pressing and holding ENTER button for 3 seconds, the unit will enter setting mode. Press "UP" or "DOWN" button to select setting programs. And then, press "ENTER" button to confirm the selection or "ESC" button to exit.

Setting Programs:

Program	Description	Selectable option	
00	Exit setting mode	Escape 00 ESC	
01	Output source priority: To configure load power source priority	Utility first (default) 01 UTI	Utility will provide power to the loads as first priority. Solar and battery energy will provide power to the loads only when utility power is not available.
		Solar first 01 SOL	Solar energy provides power to the loads as first priority. If solar energy is not sufficient to power all connected loads, Utility energy will supply power to the loads at the same time.
		SBU priority 01 SBU	Solar energy provides power to the loads as first priority. If solar energy is not sufficient to power all connected loads, battery energy will supply power to the loads at the same time. Utility provides power to the loads only when battery voltage drops to either low-level warning voltage or the setting point in program 12.
02	Maximum charging current: To configure total charging current for solar and utility chargers. (Max. charging current = utility charging current + solar charging current)	60A (default) 02 60 ^A	Setting range is from 10A to 150A for TommaTech C ProX 8.0K model.
03	AC input voltage range	Appliances (default) 03 APL	If selected, acceptable AC input voltage range will be within 90-280VAC.
		UPS 03 UPS	If selected, acceptable AC input voltage range will be within 170-280VAC.
05	Battery type	AGM (default) 05 AGM	Flooded 05 FLD

05	Battery type	User-Defined 	If "User-Defined" is selected, battery charge voltage and low DC cut-off voltage can be set up in program 26, 27 and 29.
		Pylontech battery 	If selected, programs of 02, 26, 27 and 29 will be automatically set up. No need for further setting.
		BYD battery 	If selected, programs of 02, 26, 27 and 29 will be automatically set up. No need for further setting.
		WECO battery 	If selected, programs of 02, 12, 26, 27 and 29 will be auto-configured per battery supplier recommended. No need for further adjustment.
		Soltaro battery 	If selected, programs of 02, 26, 27 and 29 will be automatically set up. No need for further setting.
		LIA-protocol compatible battery 	Select "LIA" if using Lithium battery compatible to CAN protocol. If selected, programs of 02, 26, 27 and 29 will be automatically set up. No need for further setting.
		LIb-protocol compatible battery 	Select "LIb" if using Lithium battery compatible to RS485 protocol. If selected, programs of 02, 26, 27 and 29 will be automatically set up. No need for further setting.
		3 rd party Lithium battery 	Select "LIC" if using Lithium battery not listed above. If selected, programs of 02, 26, 27 and 29 will be automatically set up. No need for further setting. Please contact the battery supplier for installation procedure.
06	Auto restart when overload occurs	Restart disable (default) 	Restart enable 
07	Auto restart when over temperature occurs	Restart disable (default) 	Restart enable 
09	Output frequency	50Hz (default) 	60Hz 
10	Output voltage	220V 	230V (default) 

10	Output voltage	220V [10] 220 ^v	230V (default) [10] 230 ^v
		240V [10] 240 ^v	
11	Maximum utility charging current Note: If setting value in program 02 is smaller than that in program in 11, the inverter will apply charging current from program 02 for utility charger.	40A (default) [11] 40 ^A	Setting range is 2A, then from 10A to 120A for TommaTech C ProX 8.0K model.
12	Setting voltage point back to utility source when selecting "SBU priority" or "Solar first" in program 01.	Available options:	
		46V (default) [12] 46 ^v	Setting range is from 44V to 51V. Increment of each click is 1V.
		Available options when any lithium battery type is selected in Program 05.	
		SOC 10% (default for Lithium) [12] 10 [%]	If any types of lithium battery is selected in program 05, setting value will change to SOC automatically. Adjustable range is 5% to 95%.
13	Setting voltage point back to battery mode when selecting "SBU priority" or "Solar first" in program 01.	Available options: Setting range is FUL and from 48V to 58V. Increment of each click is 1V.	
		Battery fully charged [13] FUL	54V (default) [13] 540 ^v
		Available option when any lithium battery type is selected in Program 05.	
		SOC 80% (default for Lithium) [13] 80 [%]	If any types of lithium battery is selected in program 05, setting value will change to SOC automatically. Adjustable range is 10% to 100%. Increment of each click is 5%.

16	Charger source priority: To configure charger source priority	If this inverter/charger is working in Line, Standby or Fault mode, charger source can be programmed as below:	
		Solar first [16] C50	Solar energy will charge battery as first priority. Utility will charge battery only when solar energy is not available.
		Solar and Utility (default) [16] 5NU	Solar energy and utility will charge battery at the same time.
		Only Solar [16] 050	Solar energy will be the only charger source no matter utility is available or not.
		If this inverter/charger is working in Battery mode, only solar energy can charge battery. Solar energy will charge battery if it's available and sufficient.	
18	Alarm control	Alarm on (default) [18] 60N	Alarm off [18] 60F
19	Auto return to default display screen	Return to default display screen (default) [19] ESP	If selected, no matter how users switch display screen, it will automatically return to default display screen (Input voltage /output voltage) after no button is pressed for 1 minute.
		Stay at latest screen [19] FEP	If selected, the display screen will stay at latest screen user finally switches.
20	Backlight control	Backlight on (default) [20] LON	Backlight off [20] LOF
22	Beeps while primary source is interrupted	Alarm on (default) [22] AON	Alarm off [22] AOF
23	Overload bypass: When enabled, the unit will transfer to line mode if overload occurs in battery mode.	Bypass disable (default) [23] BYD	Bypass enable [23] BYE
25	Record Fault code	Record enable (default) [25] FEN	Record disable [25] FDS
26	Bulk charging voltage (C.V voltage)	default setting: 56.4V [4] [26] 56.4 ^{BATT} V	
		If self-defined is selected in program 5, this program can be set up. Setting range is from 48.0V to 61.0V. Increment of each click is 0.1V.	

27	Floating charging voltage	default setting: 54.0V 	
		If self-defined is selected in program 5, this program can be set up. Setting range is from 48.0V to 61.0V. Increment of each click is 0.1V.	
29	Low DC cut-off voltage or SOC percentage	default setting: 42.0V 	
		If self-defined is selected in program 5, this program can be set up. Setting range is from 42.0V to 52.0V. Increment of each click is 0.1V. Low DC cut-off voltage will be fixed to setting value no matter what percentage of load is connected.	
30	Battery equalization	Lithium battery default setting: SOC 5% 	
		If any type of lithium battery is selected in program 05, setting value will change to SOC automatically. Adjustable range is 0% to 90%. Increment of each click is 1%.	
30	Battery equalization	Battery equalization 	Battery equalization disable (default) 
		If "Flooded" or "User-Defined" is selected in program 05, this program can be set up.	
31	Battery equalization voltage	default setting: 58.4V 	
		Setting range is from 48.0V to 61.0V. Increment of each click is 0.1V.	
33	Battery equalized time	60min (default) 	Setting range is from 5min to 900min. Increment of each click is 5min.
34	Battery equalized timeout	120min (default) 	Setting range is from 5min to 900 min. Increment of each click is 5 min.
35	Equalization interval	30days (default) 	Setting range is from 0 to 90 days. Increment of each click is 1 day.
36	Equalization activated immediately	Enable 	Disable (default) 
		If equalization function is enabled in program 30, this program can be set up. If "Enable" is selected in this program, it's to activate battery equalization immediately and LCD main page will shows "E9". If "Disable" is selected, it will cancel equalization function until next activated equalization time arrives based on program 35 setting. At this time, "E9" will not be shown in LCD main page.	

38	PV energy feed-in to grid configuration	Feed-in to grid disable (default) 	Feed-in to grid enable 
42	AC input detection current *Note: To balance AC input current when an external device (like transformer, energy meter) connected at AC input.	When there is a deviation current caused by external devices connected at AC input, it can be balanced by adjusting the current. Setting range is from 0 to 250. Increment of each click is 1. Nothing shown if unit is not in Line mode. 	150 (default) will show if unit is in Line mode. 
43	Power limit for PV energy in Line Mode *Note: This setting is to prevent excessive energy generated by PV exceeds load demand and the remaining PV energy feed-in to grid incorrectly, when an external device (like transformer or energy meter) is connected at AC input.	When there is a deviation of load detection caused by external devices connected at AC input, it can be adjusted by this setting. Setting range is from 0W to 250W. Increment of each click is 10W. Nothing shown if unit is not in Line mode. 	30W (default) will show if unit is in Line mode. 
60	Low DC cut off voltage or SOC percentage on second output (L2)	default setting: 42.0V  If User-defined" is selected in program 05, this setting range is from 42.0 to 52.0V. Increment of each click is 0.1V. Low DC cut-off voltage will be fixed to setting value no matter what percentage of load is connected. Lithium battery default setting: SOC 5%  If any types of lithium battery is selected in program 05, this program can be set up. Setting range is from 0% to 90%. Increment of each click is 1%.	
61	Setting discharge time on second output (L2)	Disable (default) 	Setting range is disable and then from 0 min to 990 min. Increment of each click is 5 min. *If the battery discharge time achieves the setting time in Program 61 and the program 60 function is not triggered, the output will be turned off.

63	Setting voltage point or SOC to restart on the second output (L2)	default setting: 46.0V 	If "User-defined" is selected in program 05, this setting range is from 43.0V to 61.0V. Increment of each click is 0.1V. *If second output is cut off due to setting in program 60, second output (L2) will restart according to setting in program 63.
		SOC: 20% (default for lithium battery) 	If any type of lithium battery is selected in program 05, this parameter value will be displayed in percentage and value setting is based on battery capacity percentage. Setting range is from 5% to 100%. Increment of each click is 5%. *If second output is cut off due to setting in program 60, second output (L2) will restart according to setting in program 63.
64	Setting waiting time to turn on the second output when the inverter is back to Line mode or battery is in charging status	0 min (Default) 	Setting range is from 0 min to 990 min. Increment of each click is 5 min. *If second output is cut off due to setting in program 61, second output (L2) will restart according to setting in program 64.

Display Setting

The LCD display information will be switched in turns by pressing "UP" or "DOWN" key. The selectable information is switched as following order in listed table.

Selectable information	LCD display
Input voltage/Output voltage (Default Display Screen)	<p>Input Voltage=230V, main output voltage=230V</p>
Input frequency	<p>Input frequency=50Hz</p>
PV1 voltage	<p>PV1 voltage=320V</p>
PV1 current	<p>PV1 current = 13.0A</p>

<p>PV1 power</p>	<p>PV1 power = 4.0kW</p> 
<p>PV2 voltage</p>	<p>PV2 voltage=320V</p> 
<p>PV2 current</p>	<p>PV2 current = 13.0A</p> 
<p>PV2 power</p>	<p>PV2 power = 4.0kW</p> 

Charging current

AC and PV charging current=60A

PV charging current=60A

AC charging current=40A

<p>Charging power</p>	<p>AC and PV charging power=1.0kW</p>  <p>PV charging power=1.0kW</p>  <p>AC charging power=1.0kW</p> 
<p>Battery voltage and output voltage</p>	<p>Battery voltage=48.8V, main output voltage=230V</p> 

<p>Feed-in to grid power (if PV energy feed-in to grid is enabled)</p>	<p>Feed-in grid power=2.0kW, main output voltage=230V</p> 
<p>Battery voltage and second output voltage</p>	<p>Battery voltage=48.8V, second output voltage=230V</p>

<p>Load percentage</p>	<p>Load percent=60%</p> 

<p>Load in VA</p>	<p>When connected load is lower than 1kVA, load in VA will present xxxVA like below chart.</p>  <p>When load is larger than 1kVA ($\geq 1\text{kVA}$), load in VA will present x.xkVA like below chart.</p> 
<p>Load in Watt</p>	<p>When load is lower than 1kW, load in W will present xxxW like below chart.</p>  <p>When load is larger than 1kW ($\geq 1\text{kW}$), load in W will present x.xkW like below chart.</p> 

<p>Battery voltage/DC discharging current</p>	<p>Battery voltage=48.8V, discharging current=30A</p> 
<p>Main CPU version checking</p>	<p>Main CPU version 00008.03</p> 
<p>Secondary CPU version checking</p>	<p>Secondary CPU version 00002.08</p> 

Operating Mode Description

Operation mode	Description	LCD display
Standby mode Note: *Standby mode: The inverter is not turned on yet but at this time, the inverter can charge battery without AC output.	No output is supplied by the unit but it still can charge batteries.	Charging by utility and PV energy. 
		Charging by utility. 
		Charging by PV energy. 
		No charging. 
Fault mode Note: *Fault mode: Errors are caused by inside circuit error or external reasons such as over temperature, output short circuited and so on.	PV energy and utility cannot charge batteries.	No charging, no output. 
Line Mode	The unit will provide output power from the mains. It will also charge the battery at line mode.	Charging by utility and PV energy. 
		Charging by utility. 
		If "solar first" is selected as output source priority and solar energy is not sufficient to provide the load, solar energy and the utility will provide the loads and charge the battery at the same time. 

Operation mode	Description	LCD display
Line Mode	The unit will provide output power from the mains. It will also charge the battery at line mode.	<p>If "solar first" is selected as output source priority and battery is not connected, solar energy and the utility will provide the loads.</p>  <p>Power from utility.</p> 
Battery Mode	The unit will provide output power from battery and PV power.	<p>Power from battery and PV energy.</p>  <p>PV energy will supply power to the loads and charge battery at the same time.</p>  <p>Power from battery only.</p>  <p>Power from PV energy only.</p> 
Grid-tie Mode (Only available when PV energy feed-in to the grid is enabled)	PV energy feed-in to the grid.	<p>PV energy feed energy to the grid while battery is not connected.</p>  <p>PV energy charges battery, PV energy provides power to the load and feeds remaining energy to the grid.</p> 

Battery Equalization Description

Equalization function is added into charge controller. It reverses the buildup of negative chemical effects like stratification, a condition where acid concentration is greater at the bottom of the battery than at the top. Equalization also helps to remove sulfate crystals that might have built up on the plates. If left unchecked, this condition, called sulfation, will reduce the overall capacity of the battery. Therefore, it's recommended to equalize battery periodically.

• How to Apply Equalization Function

You must enable battery equalization function in monitoring LCD setting program 30 first. Then, you may apply this function in device by either one of following methods:

1. Setting equalization interval in program 35.
2. Active equalization immediately in program 36.

• When to Equalize

In float stage, when the setting equalization interval (battery equalization cycle) is arrived, or equalization is active immediately, the controller will start to enter Equalize stage.

• Equalize charging time and timeout

In Equalize stage, the controller will supply power to charge battery as much as possible until battery voltage raises to battery equalization voltage. Then, constant-voltage regulation is applied to maintain battery voltage at the battery equalization voltage. The battery will remain in the Equalize stage until setting battery equalized time is arrived.

However, in Equalize stage, when battery equalized time is expired and battery voltage doesn't rise to battery equalization voltage point, the charge controller will extend the battery equalized time until battery voltage achieves battery equalization voltage. If battery voltage is still lower than battery equalization voltage when battery equalized timeout setting is over, the charge controller will stop equalization and return to float stage.

Fault Reference Code

Fault Code	Fault Event	Icon on
01	Fan is locked when inverter is off.	
02	Over temperature or NTC is not connected well.	
03	Battery voltage is too high	
04	Battery voltage is too low	
05	Output short circuited or over temperature is detected by internal converter components.	
06	Output voltage is too high.	
07	Overload time out	
08	Bus voltage is too high	
09	Bus soft start failed	
51	Over current or surge	
52	Bus voltage is too low	
53	Inverter soft start failed	
55	Over DC voltage in AC output	
57	Current sensor failed	
58	Output voltage is too low	
59	PV voltage is over limitation	

Warning Indicator

Warning Code	Warning Event	Audible Alarm	Icon flashing
01	Fan is locked when inverter is on.	Beep three times every second	
02	Over temperature	None	
03	Battery is over-charged	Beep once every second	
04	Low battery	Beep once every second	
07	Overload	Beep once every 0.5 second	
10	Output power derating	Beep twice every 3 seconds	
15	PV energy is low.	Beep twice every 3 seconds	
16	High AC input (>280VAC) during BUS soft start	None	
32	Communication failure between inverter and communication board	None	
E9	Battery equalization	None	
bP	Battery is not connected	None	

CLEARANCE AND MAINTENANCE FOR ANTI-DUST KIT

Overview

Every inverter is already installed with anti-dust kit from factory. This kit keeps dust from your inverter and increases product reliability in harsh environment

Clearance and Maintenance

Step 1: Please loosen the screw in counterclockwise direction on the top or both sides of the inverter.

Step 2: Then, dustproof case can be removed and take out air filter foam as shown in below chart

Step 3: Clean air filter foam and dustproof case. After clearance, re-assemble the dust-kit back to the inverter.

NOTICE: The anti-dust kit should be cleaned from dust every one month.

SPECIFICATIONS

Table 1 Line Mode Specifications

INVERTER MODEL	TommaTech C ProX 8.0K
Input Voltage Waveform	Sinusoidal (utility or generator)
Nominal Input Voltage	230Vac
Low Loss Voltage	170Vac±7V (UPS); 90Vac±7V (Appliances)
Low Loss Return Voltage	180Vac±7V (UPS); 100Vac±7V (Appliances)
High Loss Voltage	280Vac±7V
High Loss Return Voltage	270Vac±7V
Max AC Input Voltage	300Vac
Nominal Input Frequency	50Hz / 60Hz (Auto detection)
Low Loss Frequency	40±1Hz
Low Loss Return Frequency	42±1Hz
High Loss Frequency	65±1Hz
High Loss Return Frequency	63±1Hz
Output Short Circuit Protection	Circuit Breaker
Efficiency (Line Mode)	>95% (Rated R load, battery full charged)
Transfer Time	10ms typical (UPS); 20ms typical (Appliances)
<p>Output power derating: When AC input voltage drops to 170V, the output power will be derated.</p>	 <p>The graph illustrates the output power derating characteristics. The vertical axis represents Output Power, with two specific levels marked: 50% Power and Rated Power. The horizontal axis represents Input Voltage, with three key points marked: 90V, 170V, and 280V. The power remains constant at the Rated Power level from 170V up to 280V. Below 170V, the power derates linearly, reaching 50% of the Rated Power at 90V. Below 90V, the output power is zero.</p>

Table 2 Inverter Mode Specifications

INVERTER MODEL	TommaTech C ProX 8.0K
Rated Output Power	8KVA/8KW
Output Voltage Waveform	Pure Sine Wave
Output Voltage Regulation	230Vac±5%
Output Frequency	50Hz
Peak Efficiency	93%
Overload Protection	5s@≥120% load; 30s@103%~120% load
Surge Capacity	2* rated power for 5 seconds
Nominal DC Input Voltage	48Vdc
Cold Start Voltage	46.0Vdc
Low DC Warning Voltage @ load < 50%	46.0Vdc
@ load ≥ 50%	44.0Vdc
Low DC Warning Return Voltage @ load < 50%	47.0Vdc
@ load ≥ 50%	46.0Vdc
Low DC Cut-off Voltage @ load < 50%	43.0Vdc
@ load ≥ 50%	42.0Vdc
High DC Recovery Voltage	62Vdc
High DC Cut-off Voltage	63Vdc
No Load Power Consumption	72W

Table 3 Charge Mode Specifications

Utility Charging Mode		
INVERTER MODEL	TommaTech C ProX 8.0K	
Charging Algorithm	3-Step	
AC Charging Current (Max)	120Amp (@ $V_{I/P}=230Vac$)	
Bulk Charging Voltage	Flooded Battery	58.4Vdc
	AGM / Gel Battery	56.4Vdc
Floating Charging Voltage	54Vdc	
Charging Curve		
MPPT Solar Charging Mode		
INVERTER MODEL	TommaTech C ProX 8.0K	
Max. PV Array Power	12000W (6000W x 2)	
Nominal PV Voltage	320Vdc	
Start-up Voltage	150Vdc +/- 10Vdc	
PV Array MPPT Voltage Range	90~450Vdc (Min. 100V without Battery)	
Max. PV Array Open Circuit Voltage	500Vdc	
Max. Input Current	22Amp x 2	
Max Charging Current (AC charger plus solar charger)	150Amp	

Table 4 General Specifications

INVERTER MODEL	TommaTech C ProX 8.0K
Safety Certification	CE
Operating Temperature Range	-10°C to 50°C
Storage temperature	-15°C~ 60°C
Humidity	5% to 95% Relative Humidity (Non-condensing)
Dimension (D*W*H), mm	141 x 322 x 497
Net Weight, kg	14.3

TROUBLE SHOOTING

Problem	LCD/LED/Buzzer	Explanation / Possible cause	What to do
Unit shuts down automatically during startup process.	LCD/LEDs and buzzer will be active for 3 seconds and then complete off.	The battery voltage is too low	1. Re-charge battery. 2. Replace battery.
No response after power on.	No indication.	1. The battery voltage is far too low. 2. Internal fuse tripped.	1. Contact repair center for replacing the fuse. 2. Re-charge battery. 3. Replace battery.
Mains exist but the unit works in battery mode.	Input voltage is displayed as 0 on the LCD and green LED is flashing.	Input protector is tripped	Check if AC breaker is tripped and AC wiring is connected well.
	Green LED is flashing.	Insufficient quality of AC power. (Shore or Generator)	1. Check if AC wires are too thin and/or too long. 2. Check if generator (if applied) is working well or if input voltage range setting is correct. (UPSa Appliance)
	Green LED is flashing.	Set "Solar First" as the priority of output source.	Change output source priority to Utility first.
When the unit is turned on, internal relay is switched on and off repeatedly.	LCD display and LEDs are flashing	Battery is disconnected.	Check if battery wires are connected well.
Buzzer beeps continuously and red LED is on.	Fault code 07	Overload error. The inverter is overload 105% and time is up.	Reduce the connected load by switching off some equipment.
		If PV input voltage is higher than specification, the output power will be derated. At this time, if connected loads is higher than derated output power, it will cause overload.	Reduce the number of PV modules in series or the connected load.
	Fault code 05	Output short circuited.	Check if wiring is connected well and remove abnormal load.
	Fault code 02	Internal temperature of inverter component is over.	Check whether the air flow of the unit is blocked or whether the ambient temperature is too high.
	Fault code 03	Battery is over-charged.	Return to repair center.
		The battery voltage is too high.	Check if spec and quantity of batteries are meet requirements.
	Fault code 01	Fan fault	Replace the fan.
	Fault code 06/58	Output abnormal (Inverter voltage is too low or too high)	1. Reduce the connected load. 2. Return to repair center
	Fault code 08/09/53/57	Internal components failed.	Return to repair center.
	Fault code 51	Over current or surge.	Restart the unit, if the error happens again, please return to repair center.
	Fault code 52	Bus voltage is too low.	
	Fault code 55	Output voltage is unbalanced.	
Fault code 59	PV input voltage is beyond the specification.	Reduce the number of PV modules in series.	

Appendix I: BMS Communication Installation

1. Introduction

If connecting to lithium battery, it is recommended to purchase a custom-made RJ45 communication cable. Please check with your dealer or integrator for details.

This custom-made RJ45 communication cable delivers information and signal between lithium battery and the inverter. These information are listed below:

- Re-configure charging voltage, charging current and battery discharge cut-off voltage according to the lithium battery parameters.
- Have the inverter start or stop charging according to the status of lithium battery.

2. Pin Assignment for BMS Communication Port

	Definition
PIN 1	RS232TX
PIN 2	RS232RX
PIN 3	RS485B
PIN 4	NC
PIN 5	RS485A
PIN 6	CANH
PIN 7	CANL
PIN 8	GND

3. Lithium Battery Communication Configuration

ID Switch indicates the unique ID code for each battery module. It's required to assign an identical ID to each battery module for normal operation. We can set up the ID code for each battery module by rotating the PIN number on the ID switch. From number 0 to 9, the number can be random; no particular order. Maximum 10 battery modules can be operated in parallel.

PYLONTECH

Dip Switch: There are 4 Dip Switches that sets different baud rate and battery group address. If switch position is turned to the "OFF" position, it means "0". If switch position is turned to the "ON" position, it means "1".

Dip 1 is "ON" to represent the baud rate 9600.

Dip 2, 3 and 4 are reserved for battery group address.

Dip switch 2, 3 and 4 on master battery (first battery) are to set up or change the group address.

NOTE: "1" is upper position and "0" is bottom position.

Dip 1	Dip 2	Dip 3	Dip 4	Group address
1: RS485 baud rate=9600 Restart to take effect	0	0	0	Single group only. It's required to set up master battery with this setting and slave batteries are unrestricted.
	1	0	0	Multiple group condition. It's required to set up master battery on the first group with this setting and slave batteries are unrestricted.
	0	1	0	Multiple group condition. It's required to set up master battery on the second group with this setting and slave batteries are unrestricted.
	1	1	0	Multiple group condition. It's required to set up master battery on the third group with this setting and slave batteries are unrestricted.
	0	0	1	Multiple group condition. It's required to set up master battery on the fourth group with this setting and slave batteries are unrestricted.
	1	0	1	Multiple group condition. It's required to set up master battery on the fifth group with this setting and slave batteries are unrestricted.

NOTE: The maximum groups of lithium battery is 5 and for maximum number for each group, please check with battery manufacturer.

4. Installation and Operation

After ID no. is assigned for each battery module, please set up LCD panel in inverter and install the wiring connection as following steps.

Step 1: Use supplied RJ11 signal cable to connect into the extension port (P1 or P2).

Step 2: Use supplied RJ45 cable (from battery module package) to connect inverter and Lithium battery.

Note for parallel system:

1. Only support common battery installation.
2. Use custom-made RJ45 cable to connect any inverter (no need to connect to a specific inverter) and Lithium battery. Simply set this inverter battery type to "LIB" in LCD program 5. Others should be "USE".

Step 3: Turn the breaker switch "ON". Now, the battery module is ready for DC output.

Step 4: Press Power on/off button on battery module for 5 secs, the battery module will start up.

*If the manual button cannot be approached, just simply turn on the inverter module. The battery module will be automatically turned on.

Step 5. Turn on the inverter.

Step 6. Be sure to select battery type as "LIB" in LCD program 5.

If communication between the inverter and battery is successful, the battery icon Generally speaking, it will take longer than 1 minute to establish communication.

on LCD display will flash.

PYLONTECH

After configuration, please install LCD panel with inverter and Lithium battery with the following steps.

Step 1. Use custom-made RJ45 cable to connect inverter and Lithium battery.

Step 2. Switch on Lithium battery.

Step 3. Press more than three seconds to start Lithium battery. Output power is ready.

Step 4. Turn on the inverter.

05 PYL select battery type as "PYL" in LCD program 5.

If communication between the inverter and battery is successful, the battery icon  on LCD display will flash. Generally speaking, it will take longer than 1 minute to establish communication.

WECO

Step 1. Use a custom-made RJ45 cable to connect inverter and Lithium battery.

Step 2. Switch on Lithium battery.

Step 3. Turn on the inverter.

Step 4. Be sure to select battery type as "WEC" in LCD program 5.

If communication between the inverter and battery is successful, the battery icon on LCD display will flash. Generally speaking, it will take longer than 1 minute to establish communication.

on LCD display will flash. Generally

SOLTARO

Step 1. Use a custom-made RJ45 cable to connect inverter and Lithium battery.

Step 2. Open DC isolator and switch on Lithium battery.

Step 3. Turn on the inverter.

Step 4. Be sure to select battery type as "SOL" in LCD program 5.

If communication between the inverter and battery is successful, the battery icon on LCD display will "flash". Generally speaking, it will take longer than 1 minute to establish communication.

5. LCD Display Information

Unit powers on with lithium battery, the LCD will show lithium battery icon **Li**. Once battery BMS communication is successfully established, the LCD of inverter will shown icon . Press "UP" or "DOWN" key to switch LCD display to check battery voltage information as shown below.

Active Function

This function is to activate lithium battery automatically while commissioning. After battery wiring and commissioning is successfully, if battery is not detected, the inverter will automatically activate battery if the inverter is powered on.

6. Code Reference

Related information code will be displayed on LCD screen. Please check inverter LCD screen for the operation.

Code	Description
	If battery status is not allowed to charge and discharge after the communication between the inverter and battery is successful, it will show code 60 to stop charging and discharging battery.
	Communication lost (only available when the battery type is setting as any type of lithium-ion battery.) <ul style="list-style-type: none"> After battery is connected, communication signal is not detected for 3 minutes, buzzer will beep. After 10 minutes, inverter will stop charging and discharging to lithium battery. Communication lost occurs after the inverter and battery is connected successfully, buzzer beeps immediately.
	Battery number is changed. It probably is because of communication lost between battery packs. Please check the cables between the batteries.
	If battery status is not allowed to charge after the communication between the inverter and battery is successful, it will show code 69 to stop charging battery.
	If battery status must be charged after the communication between the inverter and battery is successful, it will show code 70 to charge battery.
	If battery status is not allowed to discharge after the communication between the inverter and battery is successful, it will show code 71 to stop discharging battery.

Appendix II: The Wi-Fi Operation Guide

Introduction

Wi-Fi module can enable wireless communication between solar inverters and the monitoring platform. Users can remotely monitor and control their inverters when they combine the Wi-Fi module with TommaTech APP. The App uses the Wi-Fi chip to provide remote monitoring data services, which is beneficial for the daily data monitoring of the inverter, querying the real-time data in the device, sending commands from the device, and operating the device remotely. The app is available for both iOS and Android.

The major functions of this APP:

- Delivers device status during normal operation.
- Allows to configure device setting after installation.
- Notifies users when a warning or alarm occurs.
- Allows users to query inverter history data.

Distributers App

2-1. Download and install APP

Please find "TommaTech Admin" app from Apple® store or Google® Play Store. Install this app in your mobile phone.

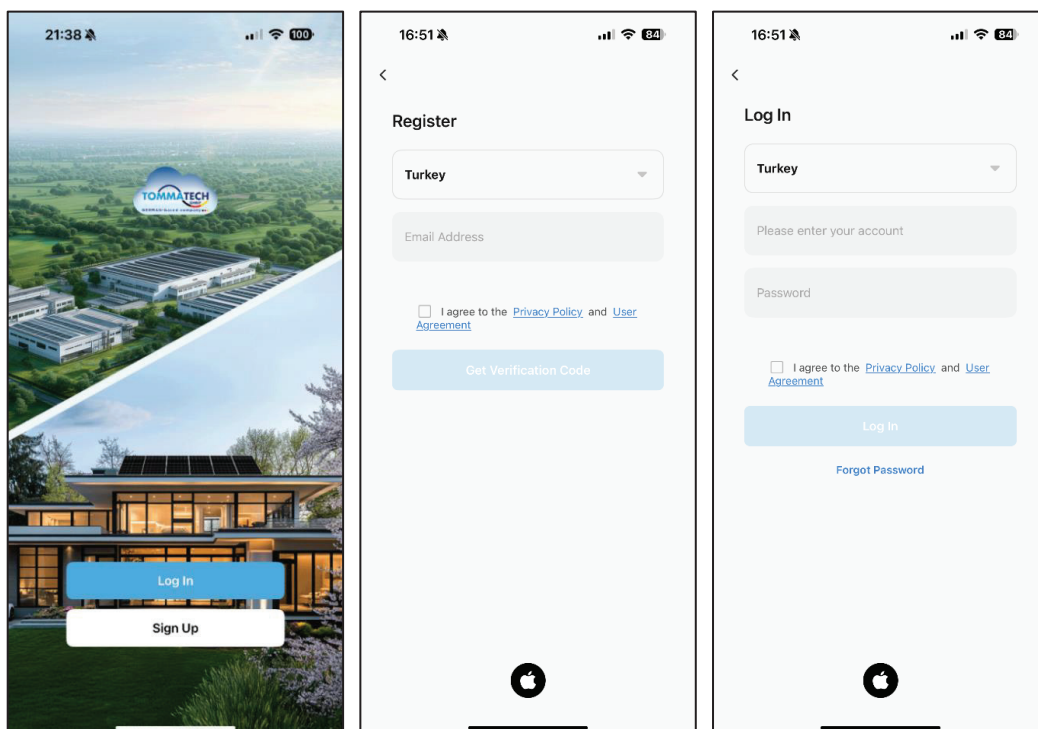

Or scan the following QR code with your smart phone and download TommaTech Admin App.

2-2. Registration and login

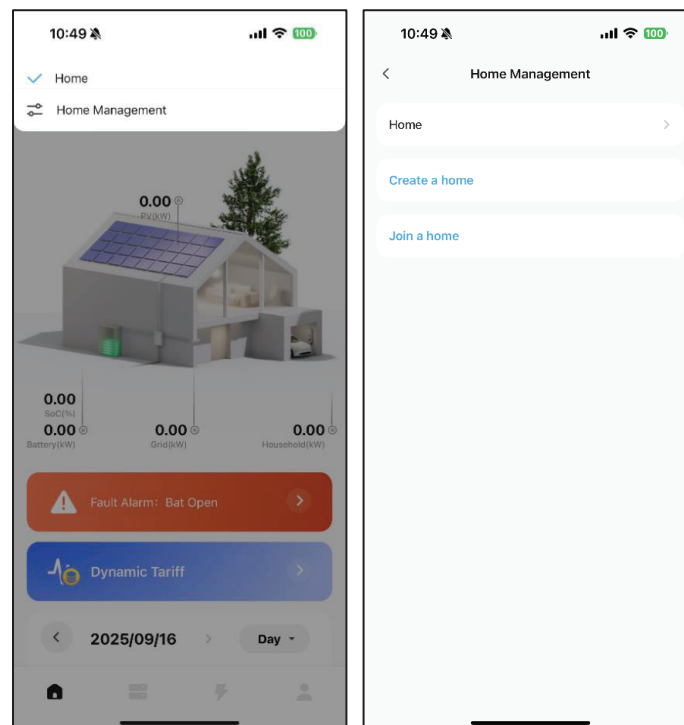

- Connect your smart phone to the router.
- Registration at first time.
- Click the "Log in New Account" to enter registration page and fill in the information. Then, enter the registered username and password to log in.

2-3. Initial Setup

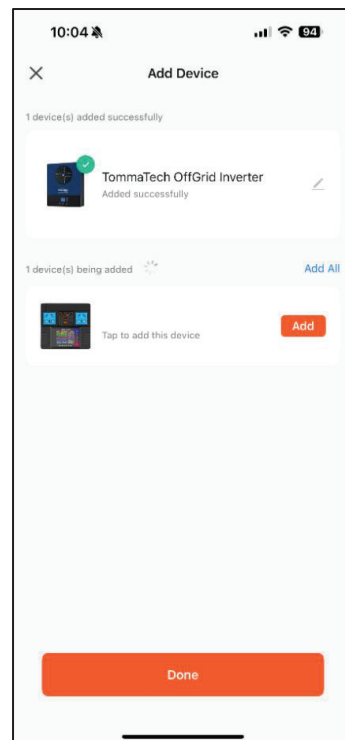

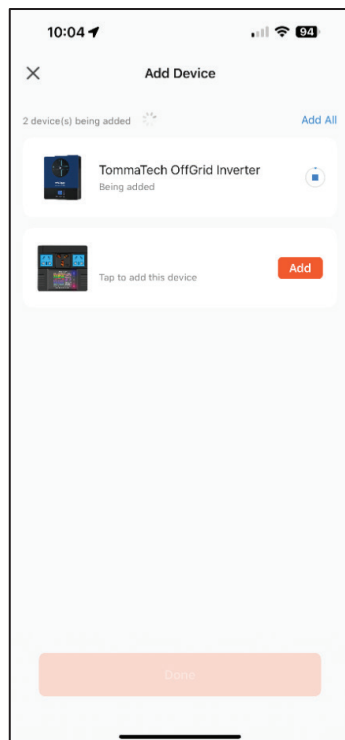

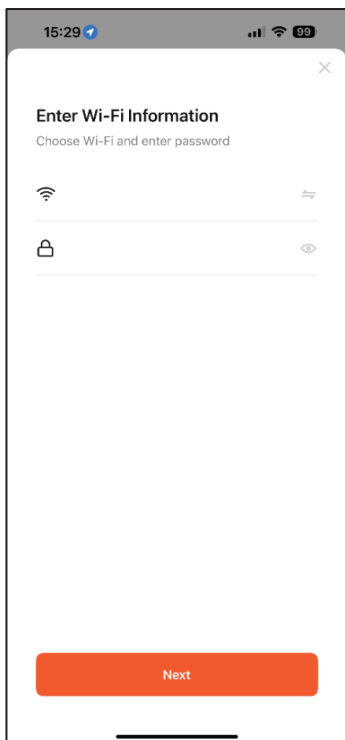

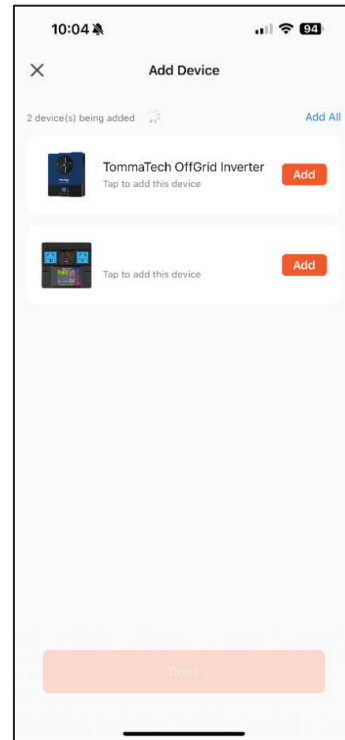

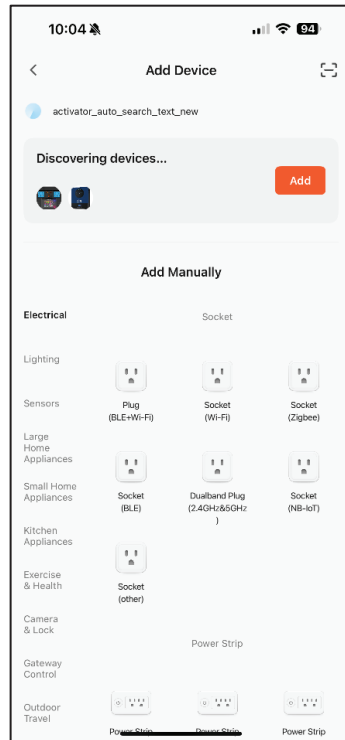

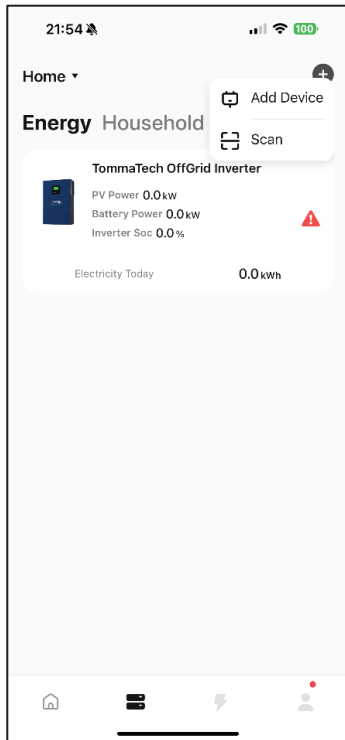

2-3-1. Create home

- Enter the registered username and password to log in.
- Click the "Home Management", "Create a home" and fill in the information to create home.

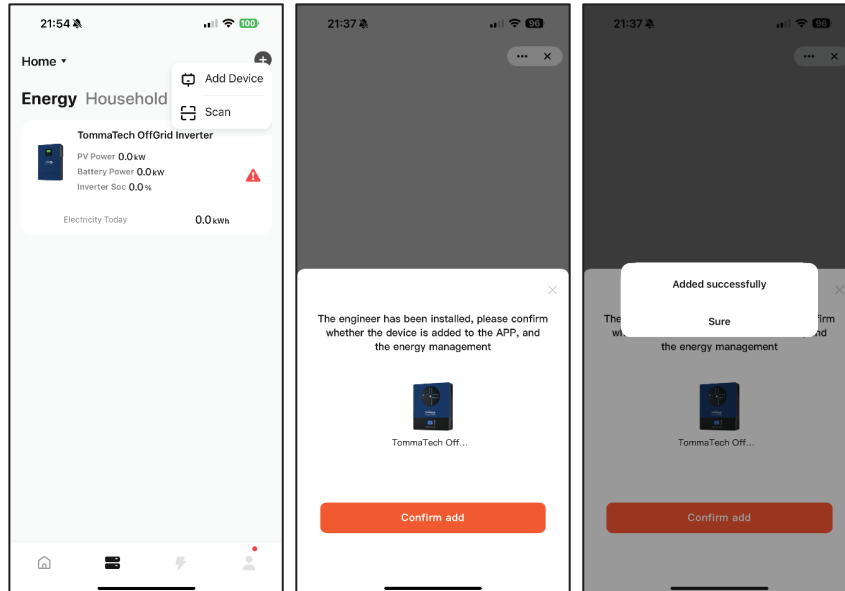

2-3-2. Add Wi-Fi module to the home and configure the network

- Turn on the unit.
- Click the "Add device" to search for nearby Wi-Fi modules that are not connected to the network. The Wi-Fi module only could connect the router at **2.4GHz**.

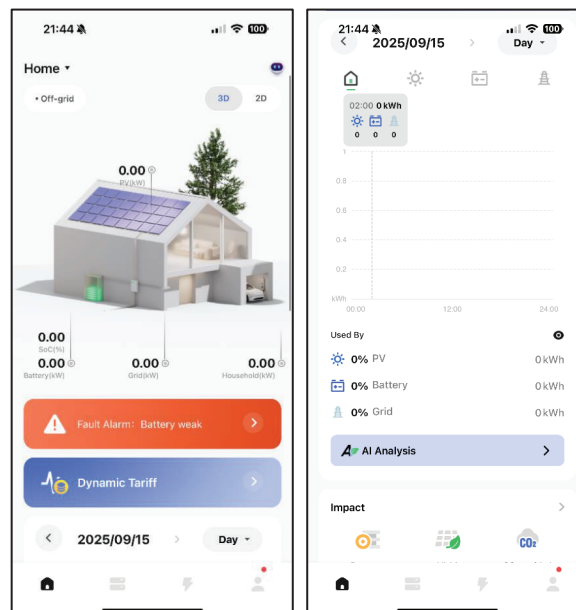

2-3-3. Handover the Wi-Fi module from the distributors

- Click "Scan" to scan the QR code provided by distributors and then click "Confirm add".

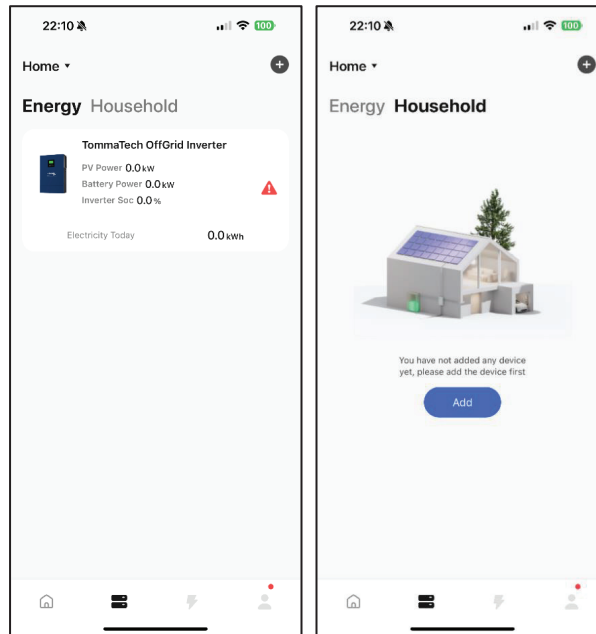

2-4. Home Management

- Includes "Data Flow Overview", "Fault and warning list, Dynamic Tariff, "Electrical Energy Analysis", and "Low-Carbon Contribution".

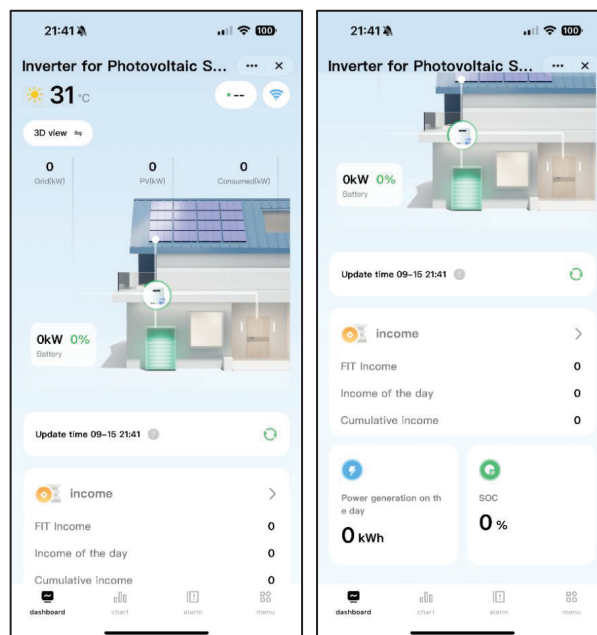

2-5. Device management

- Includes "Energy" and "Household".

2-5-1. Dashboard

- Includes "Data Flow Overview", "Income Analysis", "Power generation on the day", and "SOC".

2-5-2. Chart

- Includes "Energy Analysis", "Total Output Consumption", and "Battery" for the day, week, month and year.

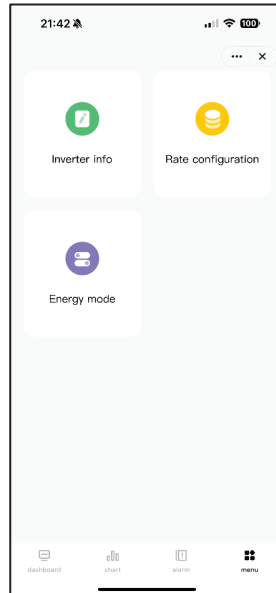

2-5-3. Alarm

- Display the warning and fault list for the day, week, month and year.

2-5-4. Menu

- Includes "Inverter info", "Rate configuration", and "Energy mode".

2-5-5. Device information

- View the device information, Wi-Fi module signal strength, router SSID, and check the Wi-Fi module is the latest version.
